

ZorbiSan Plus Bedding Conditioner

Less work thanks to cleaner animals

ZorbiSan Plus Bedding Conditioner

A clean base for clean results

Stoppages in milk production caused by hygiene problems can be expensive. Bacteria spread disease in all places where there is damp. Cows lying in cubicles are particularly at risk since their udders are in contact with the bedding or floor surface. Hygiene risks cannot be reliably overcome through organic bedding or normal bedding treatment alone.

Experts therefore use ZorbiSan Plus, with the added benefit of cutting the time involved in pre-milking udder preparation and in housing management.

Effective elimination of hygiene risks

ZorbiSan Plus is a natural bedding conditioner for professional housing hygiene management.

The result: clean and dry lying and walking surfaces on which the animals are at ease. But the milker also benefits from ZorbiSan Plus, because clean animals mean less work in pre-milking udder preparation. And removing old bedding and replacing it with new is also quick and simple.

Better atmosphere, better motivation

Both operator and animal feel more comfortable and work more efficiently in an environment where there is less smell.

Fight the enemies of successful milk production with ZorbiSan Plus.

There are a number of different uses for ZorbiSan Plus

ZorbiSan Plus can be used both on mats and mattresses as well as in deep litter, calving or sick pens. It is also suitable for calf hutches or pens and in out-of-parlour feed stations. ZorbiSan Plus is recommended not just for cows but also for calves, pigs, sheep, goats, hens, and horses.

Less flies, better performance

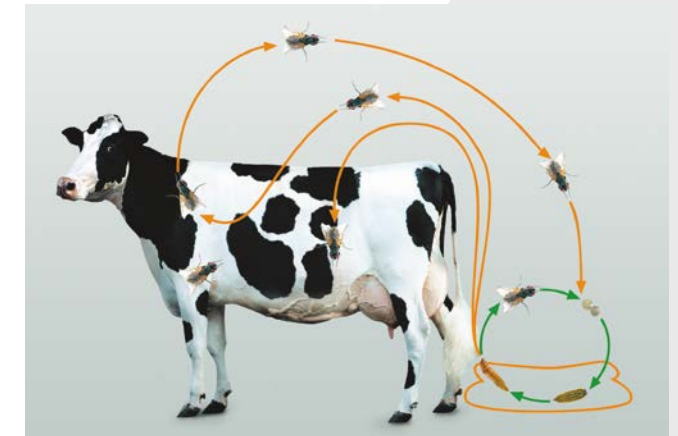

Fewer flies are found on clean, dry surfaces. ZorbiSan Plus stops the development of fly larvae and thus helps to reduce the number of flies. The cows feel more comfortable, and energy, which would otherwise be used for combating insects, can now be made available for milk production.

Remove conditions that encourage mastitis

ZorbiSan Plus is more than a bedding conditioner. Its main constituent, diatomite, a naturally-occurring, soft, chalk-like sedimentary rock, can absorb 160% of its own weight in moisture. Whether mixed with organic bedding or on its own, it removes any opportunity bacteria might have to spread on the lying and walking surfaces. The risk of expensive cases of mastitis is significantly reduced. This saves money, time, and trouble.

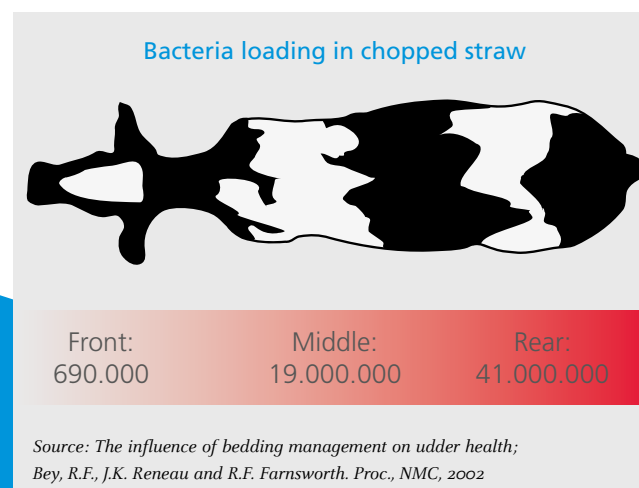

Naturally from nature

ZorbiSan Plus is a purely natural product and is thus completely harmless for man, animals and the environment. ZorbiSan Plus also meets with the demands of organic farms. It can be applied in occupied stalls and has a positive impact on manure consistency. There is no effect on the animals' breathing, and because the pH value of ZorbiSan Plus is very similar to that of the skin, it has a caring effect on the teat skin.

Advantages:

- Optimised cubicle hygiene – dry, clean lying and walking surfaces at all times
- Reduction in the amount of bacteria through quick moisture removal: micro-organisms are deprived of their breeding grounds
- Clean cows – clean teats – clean milk
- Prevention of the development of fly larvae – leads to increased productivity
- Improved atmosphere: operator and animal feel more comfortable and are more efficient
- Reduced working time in pre-milking udder preparation and in housing management
- High water absorption capability: 160% without becoming soggy
- Improves hoof health through quick drying of the hooves
- Can be used with bio-gas systems

Contagious pathogenic triggers
S. aureus
S. agalactiae

Environmental bacteria
S. uberis
E. coli

We live our values.
