

# A PLUS FOR PLANTS AND PROCESS

Pre-assembled valve manifolds

# OUR EXPERTISE – YOUR ADVANTAGE

Save effort, stress and time  
with manifolds pre-assembled  
by the manufacturer.

## From customer request (P&ID) to finished valve manifold

P&ID > Offer > Approval > Manufacturing > FAT

### Why System & Application Support directly from the factory?

Pre-assembled valve blocks provide for an efficient use of resources and require a minimum of valuable floor space. Valve manifold solutions are not one-size-fits-all solutions. In order to optimally integrate a valve matrix into a process environment, detailed planning is necessary. It is important to know the process environment and requirements.

With more than 25 years of experience in valve block design, GEA Flow Components is a competent partner. We supply valve matrix solutions worldwide and develop the manifolds according to each customer's exact specifications.

- Assembly according to your process requirements
- Consistent hygienic design
- Easy to access and to operate
- Consideration of all legal requirements

### What can you expect from us?

- ✓ Design of your valve skid from A – Z
- ✓ Ease of maintenance – we take care of this!
- ✓ GEA expansion compensators – we check what is necessary
- ✓ Space-saving design – always a priority for us
- ✓ Creation of 2D and 3D drawings and renderings
- ✓ Welding seams recorded and visualized in images and video – recording with the endoscope on request, and much more
- ✓ Functional and visual inspection after construction – always included
- ✓ Fast assembly on the construction site – we prepare it for you
- ✓ Stress-free assembly – guaranteed with us
