

GEA DIGITRON

MILKING CONTROL UNITS

The new digital generation
#conventionalgoesdigital

Design meets comfort

Enjoy working comfort of a workplace that not only looks good, but also inspires: Ergonomics and overview leave nothing to be desired!

Configured for you

Customize buttons and functions according to your needs and those of your animals. Design your own individual milking routine!

Convincing. Simple. All at a glance

It's never been easier to keep an eye on the milking process. Enjoy the intuitive process. With every task, even when it comes to service.

Always at your side

Rely on exact data and manage your herd successfully! You and your cows are always our focus.

Your choice today. For tomorrow.

Choose expandability and updates! Keep all your options open and stay always up-to-date.

DESIGN MEETS COMFORT

Enjoy working comfort of a workplace that not only looks good, but also inspires: Ergonomics and overview leave nothing to be desired!

**Milking made easy**

DigiTron is the new digital generation of milking control units by GEA. Targeted functions simplify milking routines. A comprehensive overview facilitates the demanding work of milking. Achieving your dairy farming goals has never been easier for you and your staff!

CONFIGURED FOR YOU

Customize buttons and functions according to your needs and those of your animals. Design your own individual milking routine!

“The four LED lights provide an excellent visualization of the cow’s current status!”

The right decision from the beginning

DigiTron's robust hardware is designed for a long service life, quick installation and configuration. The functions are quickly mastered and easily taught. Your milking team can concentrate undistracted on the milking routine assuring a gentle start to the milking process.

CONVINCING. SIMPLE. EVERYTHING AT A GLANCE

It's never been easier to keep an eye on the milking process. Enjoy the intuitive process. With every task, even when it comes to service.

“You immediately see what’s happening, which helps you make fewer mistakes with the cows!”

GEA Engineering
for a better
world.

Service in no time at all

Faster than ever before, the pulsator can be removed from the newly designed service box at the milking stall and replaced with a freshly serviced one. Regular service carried out in no time!

Functional design, modern look

Experience intuitive operations at every milking: GEA DigiTron's functions are quickly learned and taught. Configurable buttons at ergonomic height enable unhindered workflow. Brightly illuminated signals ensure excellent all-round visibility. Motivate your milking team with the comfort of efficient cutting-edge technology in the workplace!

Ready to go with DigiTron Basic

With DigiTron's milking control unit Basic you easily manage the milking process. Starting, stopping, milking by hand or sorting, all take place at the touch of a button. The four bright LED light signals are visible from almost any angle. They inform you about progress in the milking and rinsing process and display clear alarm signals.

GEA DairyNet® herd and farm management

The tools in GEA DairyNet® herd and farm management make your daily routine easier. Use the innovative possibilities for comfortable and comprehensive analysis of herd performance and milking sessions. Evaluate cows needing attention faster and start the appropriate measures. Optimize your milk yield, improve animal health and increase efficiency!

Full overview with ParlorView

Watch all processes at the milking rotary in a live view: The optional ParlorView presentation shows you the current key figures of the ongoing milking process. From now on you have all the data at your fingertips in real time. Specific milking stalls or individual animal data can be easily accessed via touch on the central screen.

ALWAYS AT YOUR SIDE

Rely on exact data and manage your herd successfully! You and your cows are always front and center.

Valuable service via remote access

The digital DigiTron milking control units communicate smoothly in GEA's DairyNet® network. The remote access opens the way into GEA's digital service world: Benefit from maximum performance of your milking system.

YOUR CHOICE TODAY. FOR TOMORROW.

Choose expandability and updates!
Keep all your options open and stay
always up-to-date.

Customized and future-proof

DigiTron offers numerous options from the first configuration to future updates. When your requirements change, you adapt the system according your needs. Thanks to free connectivity for additional components or sensor-based technologies, DigiTron offers you flexible options for tomorrow.

Milking sensors, as individual as your milking routine

DigiTron offers you automated milking processes in connection with milk measurement: Select the procedure that aligns with your individual milking routine, optimizes your herd's performance and suits your budget!

As precise as Metatron MB

Get thorough and extensive information on milk flow rate and milk yield for every cow. Use the detailed measurement results as a cornerstone for meticulous animal health management.

VisoFlow, extremely reliable

Focus on the essentials. The sensor keeps track of milk flow for you and takes over managing removal at exactly the right time!
