

GEA Maxidrive lubricants
for self-stacking spiral freezers

In touch with our technology

System Health

Specially for self-stacking drive systems and low-temperature conditions, GEA Maxidrive food-grade lubricants highly protect against wear, friction, corrosion and oxidation. On your drive mechanism and gearbox, they satisfy system requirements while ensuring long-lasting equipment.

Proven Performance

Comparative tests in laboratory and sites feedback confirm better performance of our lubricants:

- The low temperature oil for gearboxes separates oil and water into distinct layers faster which improves water draining away.
- Lubricant for roller chains (wagon drives & ball drives) sticks better for resisting washing operations.

Maxidrive lubricants kits offer higher efficiency and easier maintenance.

Food Safety

Qualitative and quantitative constituents of our lubricants comply with ISO standards and FDA requirements for food-grade certification.

Lubricants range		
Application	Product	Designation
Ball rail drive system	Low temperature oil	Maxidrive-oil01
Gearbox	Low temperature oil	Maxidrive-oil05
Greasing points	Low temperature grease	Maxidrive-grease35
Chain	Low temperature aerosol	Maxidrive-spray
